 ORM Number: SAS-2020-00610  
 Associated JDs: N/A  
 Review Area Location<sup>1</sup>: State/Territory: GA City: Albany County/Parish/Borough: Dougherty  
 Center Coordinates of Review Area: Latitude 31.5963 Longitude -84.1266

**II. FINDINGS**

**A. Summary:** Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- There are “navigable waters of the United States” within Rivers and Harbors Act jurisdiction within the review area (complete table in Section II.B).
- There are “waters of the United States” within Clean Water Act jurisdiction within the review area (complete appropriate tables in Section II.C).
- There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in Section II.D).

N/A.	N/A.	N/A.	N/A.

<sup>1</sup> Map(s)/figure(s) are attached to the AJD provided to the requestor.

<sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District’s list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD Form.

**D. Excluded Waters or Features**

Excluded waters ((b)(1) – (b)(12)): <sup>4</sup>				
Exclusion Name	Exclusion Size		Exclusion <sup>5</sup>	Rationale for Exclusion Determination
Wetland	12.5	acre(s)	(b)(1) Non-adjacent wetland.	This is a depressional feature surrounded by upland and is physically separated from all (a)(1)-(a)(3) waters. There is no indication of flow in or out of the feature. It is not adjacent to, does not abut or contribute surface water flow directly or indirectly to an (a)(1) water and is not inundated by flooding from an (a)(1)-(a)(3) water in a typical year. See III.C for additional discussion

**III. SUPPORTING INFORMATION**

**B. Typical year assessment(s):** [According to the Antecedent Precipitation Tool the site was under normal conditions for the dry season at the time of the Corps site visit. See attached “Antecedent Precipitation vs Normal Range based on NOAA’s Daily Global Historical Climatology Network”](#)

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.  
<sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

**C. Additional comments to support AJD:** Based on a review of the information provided by the applicant, a review of aerial photos of the subject wetlands, and the Corps site visit it has been determined that there are no (a)(1)-(3) waters entering or exiting the above referenced wetland. Additionally, the wetland is not located in the flood plain of any waterway and is situated in a depressional area that is completely surrounded by uplands. Based on the landscape position of the wetland, it is very unlikely that floodwater would reach an elevation necessary for water to flow from any (a)(1)-(3) waters into the wetlands in a typical year. The wetland is not adjacent to any (a)(1)-(a)(3) waters as defined by the NWPR. The wetland does not abut any (a)(1)-(a)(3) waters, is not inundated by any (a)(1)-(a)(3) waters, is physically separated from all (a)(1)-(a)(3) waters and does not have a direct hydrologic surface connection to any (a)(1)-(a)(3) waters in a typical year.
