² If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

³ A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A standalone TNW determination should be completed to lowing applicable guidance and should NOT be documented on the AJD Form.

B. Typical year assessment(s): The data forms provided by Sligh Environmental Consultants, Inc. indicated that they performed a wetland delineation of the project area on 4/20/2021. Using the Antecedent Precipitation Tool Version 1.0, which used rainfall data from the Savannah International Airport weather station, we have determined the delineation was conducted during the Wet Season (WebWIMP H2O Balance) and that "Normal" rainfall conditions were present for the nearest weather station on the date of the wetland delineation.

⁴ Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

⁵ Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.
