B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND: Desktop verification of the review area included using topographic contours basemap,

¹ This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.

digital elevation model vector layer, national hydrography dataset layer, aerial imagery, and national wetland inventory layer. According to the information reviewed and provided, the project review area does not display the topographic features typical of a site with aquatic resources. The project area shows extensive modification and disturbance due to the placement of the airport Runway 10-28. Field surveys were conducted by the agent to identify potential environmental features within the property, including aquatic resources, and located six wetlands within the vicinity of the project review area, however, none of the wetlands were identified within the limits of the project review area. According to the information provided from the applicant, during the time of the site delineation, the climatic conditions were normal. Therefore it is determined that currently the project review area is compose entirely dry-land.
