

Graph It!

Make 3 different boat designs using *only* a piece of 10x10 inch regular strength aluminum foil for each boat. Take a picture of each boat before testing it. You will test each boat to see how much weight it will hold. In order to show validity, you will need to test each boat 3 times. Use pennies for the weight for the boats. Make a graph to display your data from the boats. Make either a poster or a slide show which includes the pictures of your boats and your graph. You may also include additional pictures of the boats holding the pennies.
